

## RESCUE SET 8mm, 2,5 to.

In serious accidents, seconds can mean the difference between success and failure. Extreme deformation and modern vehicle design are making the work of rescue services increasingly difficult. The BAKO WORX chain rescue set is a simple and effective solution. This method and equipment, which has already been standardised with great success in Scandinavia, enables fast rescue with minimal trauma to the patient.

Pulling the vehicle outwards creates more space for the fire brigade to work and allows medical care and technical rescue to be carried out simultaneously. Chain rescue can be used very successfully in various accident scenarios, such as head-on collisions, side impacts and rear-end collisions.

For an extended range of applications, the chain rescue kit comes with two safety hooks and a foundry hook, which can be attached to the sling hooks built into the system.

Scope of delivery: 4x GrabiQ chain / 2x polyester lifting strap / 1x plastic box

Product-ID	720409
Weight	28 kg
Material	Chain steel grade 10 / Aluminium / Polyester
Load capacity*	2,5 to.
Lashing force**	51 kN
Useful length of chains	2,7 m
Useful length of round slings	6 m

\*Permissible load during crane operation (lifting)

\*\*Permissible load during operation of mechanical pulling device (pulling/securing)
